PROFESSIONAL SUMMARY

Software Engineer - AI at Amdocs, promoted within 2 years, building high-throughput telecom BSS systems, AI developer tooling, and release automation. Owns development, production support, and release readiness across ENS modules (CESApi, CSM, Billing, AR), delivering cross-functionally with OMS, CRM, and Infrastructure teams. Architected SWIFT, a Claude-powered test automation platform that cut execution time by ~90%, and published 20+ AI agent skills now used across engineering teams.

TECHNICAL SKILLS

Languages: Java · C++ · Python · SQL · JavaScript · Shell Scripting · OOP · Data Structures & Algorithms

Frameworks: Spring Boot · ReactJS · Flask · REST APIs

Databases: MySQL · SQL · Redis · ChromaDB

Cloud & DevOps: Jenkins · Docker · Kubernetes · Helm · CI/CD · ArgoCD · Git · GitHub · Perforce

AI / ML: LLM Integration · Claude API · RAG · LLM Agents · Prompt Engineering · Vector Databases · Cursor AI Agent Skills

Practices: Microservices · Distributed Systems · System Design · Release Engineering · Production Support · Agile/Scrum

Domains: Telecom BSS · CESApi · CSM · Billing · Accounts Receivable · OMS · CRM · Infrastructure

Tools: JIRA · SOAP UI · Eclipse · Unix/Linux · TCP/IP

EXPERIENCE

Amdocs *Software Engineer - AI* · Aug 2026 – Present · Gurgaon, India

- Promoted to Software Engineer - AI within 2 years for platform ownership and cross-functional delivery; scope expanded to AI tooling, release engineering, and production support across the Amdocs BSS stack.
- Deliver development and support across ENS modules I own (CESApi, CSM, Billing, AR), partnering cross-functionally with OMS, CRM, and INFRA teams on integrated features, defect fixes, and cross-module root-cause analysis.
- Authored and published 20+ Cursor AI agent skills - detailed-design generation, user-story-to-artifact pipelines, cross-module impact analysis, defect triage, and documentation drift sweeps - now adopted by teams across the account.
- Now solely manage production support, release readiness, and post-deployment sanity validation, triaging 100+ live production incidents and coordinating fixes with QA and deployment teams to keep releases on schedule.
- Independently run the SWP (Software Package) build for new release branches: trigger Jenkins packaging of code, configs, and DB scripts, validate clean builds, and publish deploy-ready packages to QA - taken over after one handover.

Amdocs *Associate Software Engineer* · Jul 2024 – Aug 2026 · Gurgaon, India

- Architected and delivered SWIFT, an AI-powered test automation platform (Claude LLM, Microservices), consolidating 50+ test flows from 15–28 manual CRM/server steps into a single-click workflow and cutting execution time by ~90%.
- Developed and integrated a Device Finance call divert feature into core subscriber lifecycle flows (suspend, resume, cease, reestablish), unifying real-time arrears-based diversion logic with the existing Airtime call divert.
- Resolved 50+ defects across billing and subscriber-management modules while maintaining a zero-critical-incident record through all release cycles in a high-availability telecom environment.
- Authored technical design documentation and API specifications for stakeholders across Product, Engineering, and QA, ensuring end-to-end alignment through the full feature lifecycle.

Ericsson *Research & Development Intern* · Jan 2024 – Jul 2024 · Gurgaon, India

- Automated a Linux-based distributed deployment pipeline, cutting setup from 12–15 hours to under 25 minutes (~97%).
- Built a Python pipeline for security scan comparison and reporting, cutting review turnaround from days to hours.

Samsung Research *Intern – PRISM Program* · Nov 2022 – Mar 2023 · Remote

- Built an NLP-based acronym identification and query disambiguation system in Python for Samsung's research corpus.

PROJECTS

DocMind: Document Q&A Agent [Link](#)

- Built a full-stack RAG + LLM agent web app (Flask, ChromaDB, Claude API) that ingests PDF/DOCX/TXT files, embeds them with SentenceTransformers, and returns cited, source-attributed answers via an agentic tool-use loop.
- Implemented a ReAct agent loop with Claude tool use, SSE streaming, and a 384-dim HNSW vector index for fast retrieval.

Stack: Python · Flask · Claude API · ChromaDB · SentenceTransformers · RAG · SSE

Crypto Tracker [Link](#)

- Built a responsive crypto dashboard with live prices for 100+ coins via CoinGecko API and Context API state management.

Stack: ReactJS · JavaScript · Material UI · Context API

AWARDS & RECOGNITION

Sprint Cycle Award *Amdocs* · Recognised for exceptional contributions to production stability and cross-functional leadership in feature delivery.

Merit Scholar *Thapar Institute of Engineering and Technology* · Awarded for top academic performance in Year 1 (CGPA: 9.64 / 10.0).

EDUCATION

Thapar Institute of Engineering and Technology *B.E. in Computer Engineering* · Aug 2020 – May 2024 · Patiala, India

CGPA: 8.68 / 10.0

Relevant Coursework: Distributed Systems · Operating Systems · Database Management Systems · Computer Networks · Machine Learning
